Dataset Template Recommendation :

Template :

Large category template: It represent only product type (Bag, wallet, Jacket…. etc)

Id	Product type
1	Wallet
2	Bag
3	Jacket

Middle category template: It represent only Brand type (Luis vitton, Gucci, Chanel, …..etc)

Id	Large_category_id	Brand
1	1	Luis vitton
2	1	Gucci
3	1	Chanel
4	1	Hemes
5	2	Gucci
6	2	Bottega veneta
7	2	Chanel
8	2	Cartier
9	3	Bertuti
10	3	Hemes

Small category template:

Here "Name" refers the summary of that content .
"Content" represents whole defect description like product materials, colour, stain, damage
location, stain condition , dirt, Mold ,…… etc related description.

Id	Middle_category_id	Name (Content summary)	Content (defect description)
1	1	Empreinte Round Long Wallet: Stains and fading	We will provide you with information as far as we can see from the images. As you can see from the images, we believe that it is possible to repair the leather in a generally good-looking way by cleansing it and adjusting the overall complementary color and gloss. The leather in the image is leather that has been processed on the surface before it is made into a product. To make it easier to understand, it is divided into three layers. ① Leather ② Binder layer (colored layer) on top of the leather ③ Top layer (layer with color fixing and gloss adjustment) on top of the binder layer. The leather is composed as above. After cleansing, if there are stains, the stains will be removed to the extent possible, and in order to make rubbing, fading, and discoloration less noticeable, if necessary, a complementary color will be applied to blend in with the binder layer, and the top layer, which also serves to adjust the gloss and fix the color, will be coated. There are some points that can be considered in terms of the finish in the above process. -Dented scratches, deep scratches that reach the surface of the rolled leather, and tears in the leather may leave marks.·If the unevenness (embossing) of the leather grain (wrinkled pattern or leather wrinkles) is rubbed away due to rubbing, it may appear smooth. ·If the stain has penetrated deeply into the leather, the newly created surface layer is made as thin as possible, and the texture and feel are prioritized, so it may remain thin and transparent. Extremely faded edges may also

remain thin and transparent. ·The texture may change slightly, such as becoming harder. ·The deformation and wrinkles caused by use may be a habit, so it may not be possible to fix them. ·If the surface layer is made thicker or the dye concentration is increased to hide scratches and stains, the unevenness (embossing) of the leather grain (wrinkled pattern or leather wrinkles) and the wrinkles of the leather will disappear, resulting in an unnatural finish, so we will prioritize the texture and restore it while keeping the balance. Regarding the color, we will mix it according to the parts in good condition. There are some parts that cannot be judged from the image and other matters that we will judge as we proceed with the process. Generally, it looks good and can be maintained, but please consider the above. Prices (tax included) Cleansing, stain removal, silver surface regeneration (re-dyeing, gloss adjustment) Entire surface 12,100 yen ·If you are considering maintenance of the inside surface If you see stains, dirt, or fading inside and would like maintenance Internal maintenance plus 2,200 yen · Regarding the coating that hides the edges The part around the zipper edge that is treated like a coating to hide the leather and leather lining is called vanish (koba). You can choose according to your preference. Deep scratches and cracks may leave marks, but it is generally repairable. If you apply a thick layer to hide scratches, it may be easier to crack, so you may need to reduce the thickness a little. Maintenance will be done according to the condition of the base. If you want vanish processing, it will be 3,300 to 4,400 yen The price will vary depending on the condition. If the damage is minor, it will be lower than the above. Please check the condition and consider. ※Vanish maintenance explained in an easy-to-understand video※https://www.youtube.com/watch?v=nlRXYzu_UtM Stain removal from zipper fabric If the stain is severe and you would like it removed, we will perform maintenance for an additional fee. In that case, please be aware of the following points. The stains on the zipper fabric are often smudged, and to put it simply, there are many stains that look like they have been smudged on the collar of a dress shirt. If you use a strong stain remover, it will seep into the body and make the condition worse, so we will prepare a

			stain remover that does not seep into the inside and perform maintenance to the extent possible. We will do our best, but if the stain is severe, we would like you to consider this as maintenance to make it look better than it is now. Zipper fabric maintenance 2,200 yen *If you are happy with simple cleansing, there is no need to add anything. ■Delivery time: About 1 month
2	1	Suhali Round Long Wallet: A color other than black that needs white	We will provide you with information as far as we can see from the images.
